

Evaluation & Performance Impact Plan

Leadership Readiness Pathway · NexaTech Onboarding Pathway

Sanjana Kashyap · Instructional Design Portfolio

About this document

This document shows how I would evaluate each of my two portfolio projects and connect them to workplace performance. It covers the performance goal, the evaluation levels, the data I would collect and how that data would drive design changes.

STATUS: PROPOSED DESIGN

No learner data has been collected and neither project has been deployed in a live organisation. Baselines and targets are illustrative examples that show how I would set and measure a performance goal. Both courses are self-initiated portfolio projects.

My evaluation approach

- **Start from performance.** I define what people should do differently at work before choosing what to measure.
- **Use Kirkpatrick's four levels.** Reaction, learning, behaviour and results, each with a clear measure and a realistic timing.
- **Measure decisions, not just completion.** In scenario-based courses the most useful data is which choices learners make and why.
- **Close the loop.** Each measure has a rule for what I would change if the data shows a problem.

Label used here	Meaning	Where it appears
Proposed	A plan I have designed and not yet deployed	Evaluation levels, measures, pilot design
Illustrative	An example baseline, target or threshold	Performance goals and decision rules

Part 1 · Leadership Readiness Pathway

1.1 Scope and current status

Module	Build status	Evaluation approach
1 Coaching & Feedback	Fully built (Rise 360 + Storyline 360)	Learner evaluation at Levels 1 and 2, with in-course decision data
2 Delegation & Trust-Building	Storyboard level	Design review of the storyboard before any build
3 Difficult Conversations & Conflict	Storyboard level	Design review of the storyboard before any build
4 Strategic Decision-Making	Concept level	Design review of the concept and consequence dashboard

1.2 Performance goal

Element	Content (Illustrative)
Business problem	Strong individual contributors are promoted into management without practice in people-leadership judgment, which leads to avoidable coaching, delegation and conflict errors in their first months.
Target performance	Promotion-track individual contributors choose the supportive, well-calibrated response in realistic coaching, delegation, conflict and resourcing situations.
Baseline	Newly promoted managers are rated 3.0 out of 5 on people-leadership readiness by their own managers at 90 days.
Target	Raise that rating to 3.8 out of 5 for managers who completed the pathway, compared with a group who did not.
Data source	HR or L&D survey tool for the manager survey; LMS report for in-course data.

1.3 Evaluation plan (all Proposed)

Level	What is evaluated	Measure	Timing
1 Reaction	Relevance and realism of the scenarios; clarity of navigation	Short learner survey with a 1 to 5 rating on "This scenario felt realistic", plus open comments	Straight after the module
2 Learning	Quality of judgment in Module 1	Share of learners choosing the supportive response at Decision 1 and Decision 2; whether choices change on restart	During the module
3 Behaviour	Use of coaching behaviours on the job	Manager observation checklist; coaching 1:1s held per month	60 to 90 days
4 Results	Business impact	Early-manager escalations; team engagement scores; regretted attrition in new-manager teams	6 months

1.4 In-course measures I would track

Measure	Why it matters	What I would do with it
Choice distribution at Decision 1	Shows which failure pattern is most tempting	Check whether cues and option wording are realistic and fair
Decision 2 choice, split by Decision 1 path	Tests whether the path-dependent design changes behaviour	Strengthen consequence slides if learners repeat the same mistake
Use of Restart on the reflection slide	Shows whether learners are curious to try another path	Prompt more exploration if few learners restart
Time to complete against the planned 6 to 8 minutes	Shows pacing problems	Trim or split slides if the module runs long

1.5 Decision rules for improving the module (Illustrative thresholds)

If the data shows	I would
More than half of learners pick the same non-supportive option at Decision 1	Review whether the signs of stress are too subtle or the option wording is leading
Learners who chose a non-supportive option at Decision 1 repeat it at Decision 2	Make the link between choice and outcome more explicit on the consequence slide
Fewer than one in five learners use Restart	Add a clear prompt on the reflection slide inviting a different path

1.6 Planned pilot (Proposed)

If I run a pilot, I would test Module 1 with 4 to 6 peer reviewers: people with management experience, individual contributors and fellow instructional designers. Reviewers would complete the module, comment in Articulate Review 360 and answer a short survey, and one reviewer would think aloud while working through it. Modules 2 to 4 would be reviewed through a walkthrough of the storyboard outlines. Any results would be reported as a small peer pilot, not a live deployment.

- Success criteria (Illustrative): at least 4 of 5 reviewers rate the scenario as realistic (4 or 5 out of 5).
- No single decision point confuses more than one reviewer.
- Reviewers can explain why the supportive response is the strongest choice.

Part 2 · NexaTech Onboarding Pathway

2.1 Scope and current status

Area	Build status	Evaluation approach
Modules 1, 2, 3, 5, 6, 7, 8 (Rise 360)	Built	Reviewer walkthrough of the full course; accuracy data from the Module 5 sorting activity and Module 8 knowledge check
Module 4 Policies & Expectations (Storyline 360)	Built	Decision-quality data, including use of the handbook check before choosing

2.2 Performance goal

Element	Content (Illustrative)
Business problem	New employees receive a large amount of information but cannot reliably apply it, which leads to repeat questions to HR and avoidable policy errors such as sharing documents externally.
Target performance	New hires find the right resource or contact, apply workplace expectations in realistic situations, and complete their first-week and 30-day actions.
Baseline	About 6 repeat policy or process questions per new hire to HR in the first 30 days, and about 10 working days to the first independent task.
Target	Cut repeat questions by 30 percent and reduce time to first independent task to about 7 working days.
Data source	HR helpdesk or ticket system; manager check at day 30; LMS report for in-course data.

2.3 Evaluation plan (all Proposed)

Level	What is evaluated	Measure	Timing
1 Reaction	Clarity, navigation and usefulness of the onboarding journey	Short learner survey with a 1 to 5 rating on clarity, plus open comments	Straight after the course
2 Learning	Module 4 decision quality; resource use; Module 5 sorting; Module 8 knowledge check	First-attempt accuracy in Module 4; share who open the handbook before choosing; sort accuracy; knowledge check score	During the course
3 Behaviour	Applying expectations and using resources at work	Manager check at day 30; completion of the 30-day action plan; repeat questions to HR	30 days
4 Results	Faster productivity and fewer avoidable errors	Time to first independent task; HR query volume; 90-day retention	90 days

2.4 In-course measures I would track

Measure	Why it matters	What I would do with it
Module 4 choice distribution	Shows which workplace response is most tempting	Check whether the scenario and options are realistic
Handbook check used before deciding	The behaviour the module teaches is checking guidance first	Make the resource check more prominent if it is rarely used
Module 5 first-try sorting accuracy and common misroutes	Shows where learners confuse teams and systems	Clarify item wording or the team descriptions in Module 3
Module 8 knowledge check by question	Shows which concepts did not stick	Revisit the matching module content
Completion and drop-off point	Shows where the journey loses people	Shorten or add progress cues at that point

2.5 Decision rules for improving the course (Illustrative thresholds)

If the data shows	I would
Fewer than half of learners open the handbook before choosing in Module 4	Place the resource check before the decision card and add a prompt
Many learners misroute the same Module 5 item	Clarify that item and the matching team description earlier in the course
Most learners stop before Module 8	Shorten earlier modules or add clearer progress cues

2.6 Planned pilot (Proposed)

If I run a pilot, I would ask 4 to 6 reviewers, including people who recently changed jobs, someone from HR or operations and fellow instructional designers, to complete the course and comment in Articulate Review 360. One reviewer would think aloud through Module 4. Results would be reported as a small peer pilot, not a live deployment.

- Success criteria (Illustrative): at least 4 of 5 reviewers find the right team for three everyday questions without help.
- Reviewers say the handbook check before the Module 4 decision felt natural.
- No module is reported as unclear by more than one reviewer.

Part 3 · Limitations and project page summaries

3.1 Limitations

WHAT THIS PLAN CANNOT SHOW

Both projects are self-initiated and use a fictional organisation, so there are no real stakeholders, learners or business results yet. Levels 3 and 4 need a real deployment. The baselines and targets are examples of how I would set goals, not measured figures.

3.2 Short summary for the Leadership Readiness Pathway page

EVALUATION AND IMPACT (PROPOSED)

Performance goal (illustrative). Raise manager-rated readiness of newly promoted managers from 3.0 to 3.8 out of 5 at 90 days.

Evaluation plan (proposed). Levels 1 and 2 would be tested with peer reviewers on Module 1, using survey ratings and decision-path data. Levels 3 and 4 would need a real deployment and would use a 90-day manager survey and early-manager escalation data.

Scope. Module 1 is fully built. Modules 2 to 4 are storyboarded and would be reviewed through a design walkthrough.

3.3 Short summary for the NexaTech Onboarding Pathway page

EVALUATION AND IMPACT (PROPOSED)

Performance goal (illustrative). Cut repeat policy questions to HR by 30 percent and reduce time to first independent task from about 10 to about 7 working days.

Evaluation plan (proposed). Levels 1 and 2 would be tested with peer reviewers, using Module 4 decision data, handbook-check use, Module 5 sorting accuracy and the Module 8 knowledge check. Levels 3 and 4 would use a day-30 manager check and HR ticket data in a real deployment.
