

NEXATECH ONBOARDING PATHWAY

CURRICULUM MAP & LEARNING ARCHITECTURE

Corporate Onboarding · Instructional Design Portfolio Project

1. Program Overview

New employees receive a large amount of onboarding information from HR, managers, and internal systems. Information alone, however, does not ensure confident workplace performance. New hires may know company facts without knowing what matters, where to find information, who to approach, or how to apply expectations in real situations.

The NexaTech Onboarding Pathway is designed around a performance arc rather than a content checklist. The pathway moves learners through four practical capabilities:

UNDERSTAND → DECIDE → FIND → ACT

The intended result is not simply recall of onboarding information. Learners should be able to demonstrate understanding, make appropriate decisions, locate the right resource or contact, and act on essential first-week and 30-day priorities.

2. Target Audience

New hires joining NexaTech Solutions, particularly employees who are unfamiliar with the organisation and with corporate work environments generally.

3. Learner Profile

Dimension	Profile
Role	Entry-level professional
Experience	First corporate role
Work environment	Hybrid
Digital confidence	High
Prior knowledge of organisation	None
Situation	Recently joined NexaTech; receives information from HR, manager and systems but does not yet know what is important, where to find it, who to approach, or how to apply workplace expectations.
Goals	Understand the organisation and purpose, structure, expectations, everyday decisions, help/resources, and first-week actions.
Challenges	Information spread across sources; unfamiliar terminology; unclear contacts; may know policy but not application; hesitation to ask basic questions; information overload.
Onboarding need	A clear, practical, easy-to-navigate experience that helps the learner understand, decide, find and act.

4. Learning Objectives

1. Explain NexaTech's purpose, organisational structure and core values in the context of their role. (Bloom's: Understand)
2. Identify the appropriate policies, people and resources for common workplace situations. (Bloom's: Understand)
3. Apply NexaTech's workplace expectations and values to realistic day-to-day scenarios. (Bloom's: Apply)
4. Locate essential tools, systems and support resources needed to perform first-week responsibilities. (Bloom's: Apply)
5. Prioritise and complete key onboarding actions during the first week. (Bloom's: Evaluate → Apply)

5. Learning Architecture

The sequence follows the UNDERSTAND → DECIDE → FIND → ACT design philosophy rather than an arbitrary content order. Modules 1–3 establish organisational understanding before learners are asked to make decisions. Module 4 introduces decision-making under realistic conditions. Modules 5 and 7 develop resource-finding skills. Module 6 returns to decision-making in a culture and ownership context. Module 8 closes with application and concrete next steps. This progression also scaffolds cognitive complexity in Bloom's terms: UNDERSTAND sits at the Remember/Understand levels, DECIDE and FIND require Apply-level thinking (with Module 4 and Module 6's branching scenarios touching Analyse), and ACT consolidates at Apply, moving into Create as learners build their own 30-day action plan.

6. Curriculum Map

#	Module	Core Skill / Outcome	Bloom's Level	Instructional Approach	Tool	Est. Time	Development Status
1	Welcome & Orientation	Understand what onboarding covers and how to navigate it	Remember	Roadmap + navigation introduction	Rise	3–4 min	Concept-level
2	Mission, Vision & Values	Explain NexaTech's purpose and values; connect values to workplace behaviour	Understand → Apply	Content + value-to-behaviour matching	Rise	4–6 min	Content mapped
3	Organisation & Roles	Identify teams, responsibilities and who to approach for common needs	Understand → Apply	Interactive organisation map + “who would you contact?”	Rise	5–7 min	Content mapped
4	Policies & Expectations	Recognise when to check guidance and apply appropriate workplace/security actions across two realistic decision points	Apply (Analyze)	Branching scenario with embedded resource look-up + consequence/feedback (2 decision points)	Storyline	8–10 min	Built

5	Logistics	Locate essential practical information needed for day-to-day work	Apply	Quick reference + resource-finding challenge	Rise	5–7 min	Content mapped
6	Culture & Ways of Working	Apply cultural expectations such as ownership and communication in a realistic dilemma	Apply	Branching scenario + consequence/feedback	Storyline	6–8 min	Storyboard only
7	Tools, Resources & Support	Locate the appropriate tool, resource or contact for a given need	Apply	Interactive resource hub + “where would you go?”	Rise	5–7 min	Content mapped
8	Knowledge Check & Next Steps	Demonstrate understanding across modules and plan first-week/30-day actions	Apply → Create	Mixed knowledge check + action plan	Rise	8–10 min	Concept-level

Development approach: the full eight-module architecture is retained as the curriculum design. The portfolio build will fully develop one Storyline showcase scenario (Module 4); Module 6 will be designed at storyboard level, while the remaining modules remain content-mapped for Rise.

7. Learning Journey

Stage	Modules	Purpose
UNDERSTAND	Modules 1–3	Establish what NexaTech does, why it exists, how it is organised, and what learners need to know before making decisions.
DECIDE	Module 4	Apply policy and security expectations in a realistic situation where the correct action is not simply a matter of recall.
FIND	Modules 5 & 7	Build the ability to locate practical information, tools, resources and the right contact.
DECIDE / APPLY	Module 6	Apply culture and ownership expectations in a realistic workplace dilemma.
ACT	Module 8	Consolidate learning and convert it into concrete first-week and 30-day actions.

8. Design & Development Direction

The pathway uses Rise for the core onboarding experience and reserves Storyline for the moments where decision-based branching and consequence feedback add clear instructional value. This keeps the learning architecture scalable while using higher-complexity development selectively.

- Module 4 is the primary Storyline showcase: a policy/security decision scenario built around two decision points rather than one, so it holds up as a genuine branching scenario rather than a single-choice interaction. The second decision embeds a short resource look-up (the learner checks the actual sharing guidance before responding), pairing decision-based branching with just-in-time performance support rather than branching logic alone. The module opens with a short guide-character screen (Nex) that frames what the module covers before the first scenario, and is delivered inside the Rise course through an embedded Storyline block, with lead-in and hand-off content authored directly in Rise around it.
- Module 6 is retained as a storyboarded Storyline scenario: a culture/ownership dilemma focused on recognising risk and communicating early.
- Modules 1–3, 5, 7 and 8 are designed as Rise experiences at curriculum/content-map level for the portfolio.
- Detailed module treatment will be separated into a dedicated storyboard document rather than overloading this curriculum map.

9. Content Reference Scope

The curriculum is supported by a practical reference layer covering common first-week transactions and resources, including transport, reimbursement, payroll, benefits, IT support, policies, learning, communication, project work, and manager support. These references provide source material for Modules 5 and 7 and for contextualising scenario activities.
