NEXATECH ONBOARDING PATHWAY

Module 4 — Policies & Expectations

“What Would You Do?”

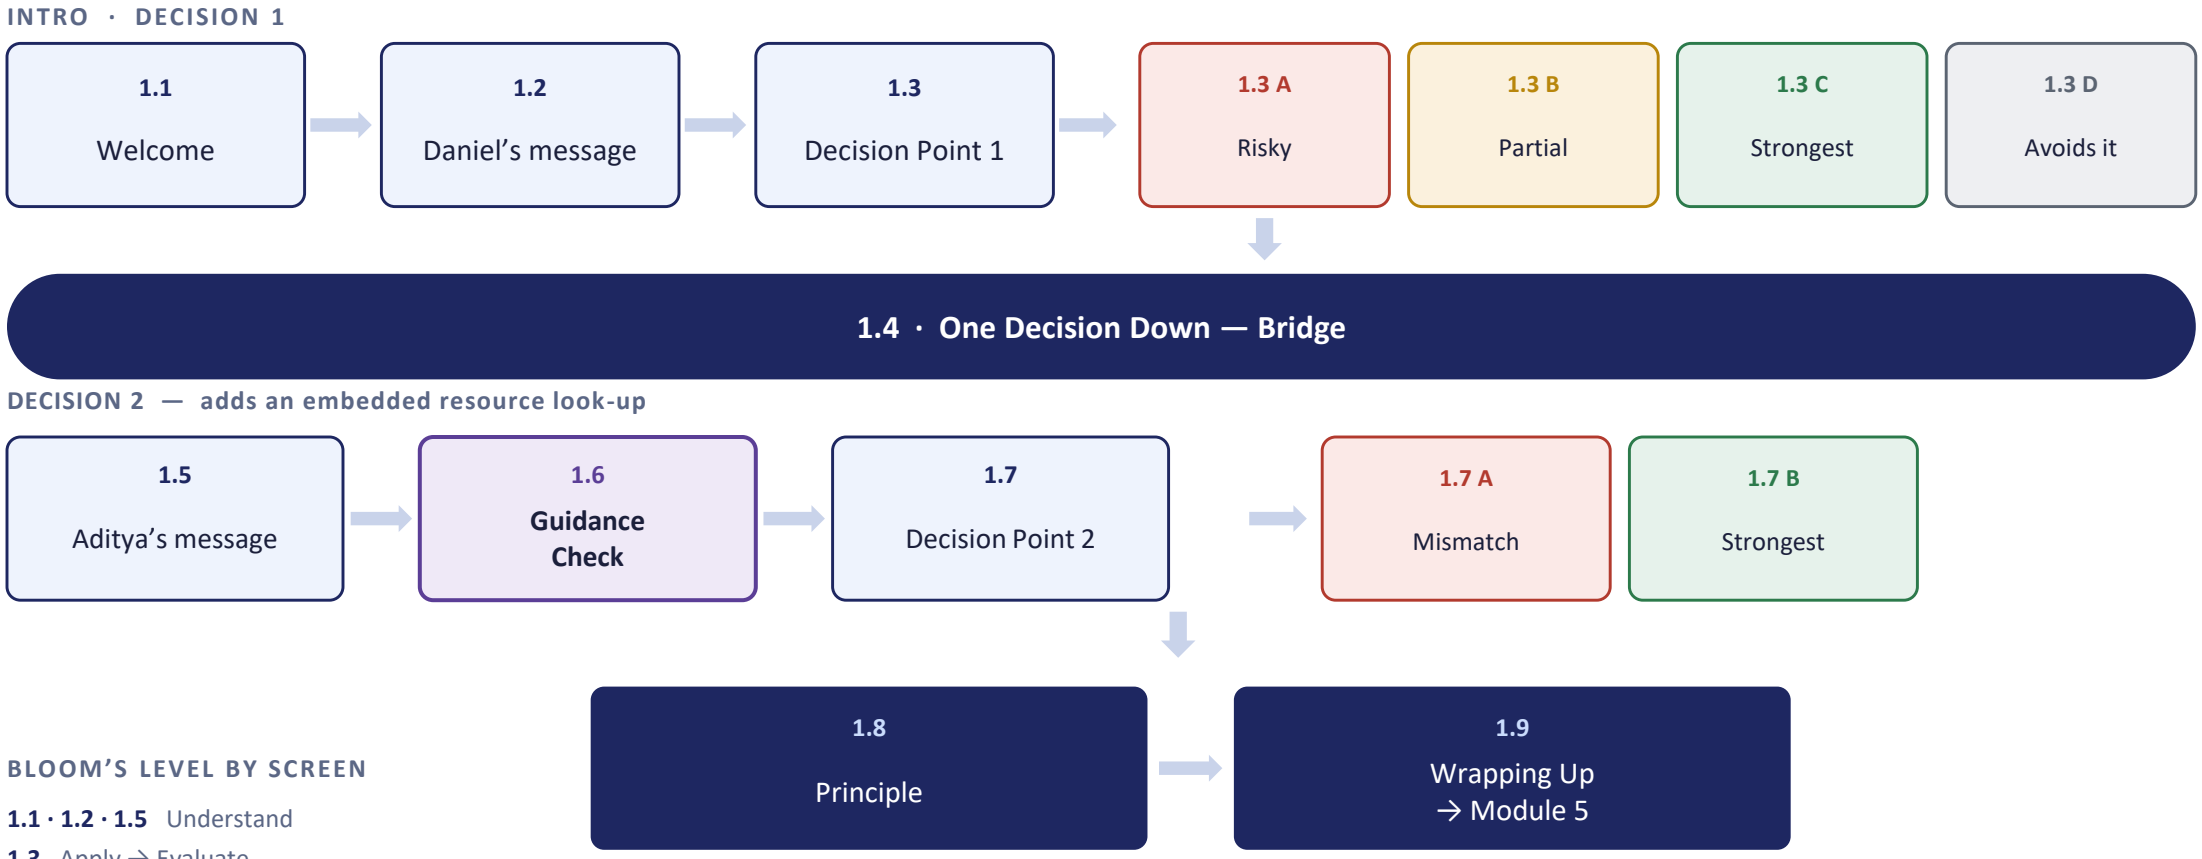

Two-decision branching scenario: a document-sharing call, then a second judgment call with an embedded guidance look-up. Introduced by an on-screen guide, Nex.

- 2 decision points
- Consequence-based feedback
- Embedded resource look-up

Instructional Design Portfolio Project
Designer: Sanjana Kashyap

Screen Flow & Design Intent

Two decision points, two different mechanics — branching, then branching + resource look-up · slide numbers follow the Storyline file

BLOOM'S LEVEL BY SCREEN

1.1 · 1.2 · 1.5 Understand
1.3 Apply → Evaluate
1.3 A–D · 1.7 A–B Evaluate
1.6 · 1.7 Apply
1.8 Understand → Analyze

Welcome — Meet Your Guide

A guide character frames the module before the first scenario

BLOOM'S LEVEL

Understand

Frames what the module covers and what will be practised.

"Hi, I'm Nex, I'll be walking you through this module. It'll take about 8 minutes."

NEX

Guide character (Nex)

MODULE 4

Policies and Expectations

What you'll learn

- Recognise when a situation calls for checking guidance before you act
- Apply NexaTech's expectations across two realistic workplace decisions

Continue

SCREEN

1.1

INTERACTION

Learner meets Nex, the guide character, reads what the module covers and what they will practise, then presses Continue to the first scenario.

BUILD NOTES

- Trigger: Continue button → jump to 1.2 on click
- Soft lavender background (#EFE9F7) so it reads as "the guide talking", distinct from the app-style screens that follow
- Voice-over: greeting and module framing (script in slide notes); slide resets on revisit so the audio replays
- No score impact on this screen

Situation Setup — Decision 1

Learner reviews the situation before making a decision

BLOOM'S LEVEL

Understand

Reads and interprets the situation before any decision.

NEXACHAT

DM

Daniel Moss

Marketing Team · 2nd floor

Hi Aisha! Putting together a partner presentation this week — could you send over the Q3 client rollout doc your team worked on? Would really help. Thanks!

It's your second week. Daniel isn't on your team, and you're not sure whether this document is yours to share.

What do you do?

SCREEN

1.2

INTERACTION

Learner reads the scenario and message, then presses Continue to the decision point.

BUILD NOTES

- Trigger: Continue button → jump to 1.3 on click
- Use a realistic chat/message interface, not narration text
- Keep the request plausible — not an obvious red flag
- No score impact on this screen
- Voice-over: reads the scenario and message aloud (script in slide notes)

Decision Point 1

Learner selects one response — single attempt

BLOOM'S LEVEL

Apply → Evaluate

Weighs four options, including a partial-credit one, against risk.

Daniel is waiting on a reply. What's your response?

- **A** Send it — he works at NexaTech, so it should be fine.
- **B** Send only the sections that seem relevant to his request.
- **C** Check the sharing guidelines, or ask your manager or project lead first.
- **D** Don't respond — better to stay out of it.

SCREEN

1.3

INTERACTION

Four selectable response cards. Selecting one locks the choice and advances to the matching feedback layer.

BUILD NOTES

- On click: set Choice_4a = A / B / C / D, set all four cards to Disabled, mark the clicked card Selected, show its layer
- Branch: A → 1.3 A, B → 1.3 B, C → 1.3 C, D → 1.3 D
- Locked within a visit; slide resets on revisit, so going back with Prev gives a fresh decision
- No "correct answer" styling shown at this stage
- No voice-over — learner is deciding

Consequence & Feedback

“What Would You Do?” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence.

YOU CHOSE

A — “Send it — he works at NexaTech.”

RISKY MOVE

The document went out — and it included client financial details that weren’t meant for a partner presentation. Working at NexaTech doesn’t mean someone is cleared to see everything; it’s the document’s content, not the recipient’s employee status, that decides what can be shared.

Consequence: *A compliance concern is raised, and Aisha’s manager has to explain the exposure to the client account team.*

LAYER

1.3 A

INTERACTION

Learner reaches this layer only after choosing A. Slide-in feedback panel with a red status tag and a Continue button to 1.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: warning triangle
- Continue button → 1.4 (all branches converge)
- Log Choice_4a = A for reporting
- No voice-over; Prev is disabled on the layer

Consequence & Feedback

“What Would You Do?” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence.

YOU CHOSE

B — “Send only the relevant sections.”

PARTIAL CREDIT

Better than sending everything — you used some judgment instead of forwarding the whole file. But you still decided on your own what counted as “relevant,” without confirming that any of it was cleared to leave the team. It happened to be fine this time; that isn’t the same as being a safe process.

Consequence: *No exposure this time, but the same shortcut with a different document could easily go the other way.*

LAYER

1.3 B

INTERACTION

Learner reaches this layer only after choosing B. Slide-in feedback panel with an amber status tag and a Continue button to 1.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: half-filled circle
- Continue button → 1.4 (all branches converge)
- Log Choice_4a = B for reporting
- No voice-over; Prev is disabled on the layer

Consequence & Feedback

“What Would You Do?” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence.

YOU CHOSE

C — “Check guidance, or ask my manager first.”

STRONGEST RESPONSE

You paused, checked the internal sharing guidance, and confirmed with your project lead before responding. Daniel got a same-day answer — a summary was cleared and shared through the right channel. Nothing was delayed, and nothing was exposed.

Consequence: *The request is resolved cleanly, and Daniel now knows the right way to ask next time.*

LAYER

1.3 C

INTERACTION

Learner reaches this layer only after choosing C. Slide-in feedback panel with a green status tag and a Continue button to 1.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: check mark
- Continue button → 1.4 (all branches converge)
- Log Choice_4a = C for reporting
- No voice-over; Prev is disabled on the layer

Consequence & Feedback

“What Would You Do?” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence.

YOU CHOSE

D — “Don’t respond — stay out of it.”

AVOIDS THE PROBLEM

> Staying quiet avoided the risk of sharing something you shouldn’t have — but Daniel is still waiting. He doesn’t know if you saw his message, if you’re checking on it, or if he needs to go around you and ask someone else. Avoiding a decision is still a decision, and it doesn’t make the request go away.

Consequence: *Daniel escalates to Aisha’s manager two days later, and the delay reflects on Aisha rather than on the request itself.*

LAYER

1.3 D

INTERACTION

Learner reaches this layer only after choosing D. Slide-in feedback panel with a gray status tag and a Continue button to 1.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: minus / dash
- Continue button → 1.4 (all branches converge)
- Log Choice_4a = D for reporting
- No voice-over; Prev is disabled on the layer

One decision down.

You paused and checked instead of guessing — or you saw what happens when you don’t. Judgment calls like this don’t stop after one email.

This time, you can check the actual guidance yourself before deciding.

Continue →

Situation Setup — Decision 2

A different kind of request — this one from outside NexaTech

BLOOM'S LEVEL

Understand

Interprets an external request with a different risk profile.

NEXAMAIL

AS

Aditya Sharma

Account Manager · BrightPath Logistics (Vendor)

Hi Aisha, congrats on the new role! We're setting up something similar for our own team — mind sending over NexaTech's internal onboarding schedule? Just want to see how you've structured it.

Aditya isn't a NexaTech employee. Before you decide how to respond, you can check the guidance on requests like this.

What do you do?

SCREEN

1.5

INTERACTION

Learner reads the second scenario. This time the request is external (a vendor), not internal — a different risk profile from 1.2.

BUILD NOTES

- Trigger: Continue button → jump to 1.6 on click
- Email-style interface (vs. chat style in 1.2) to signal a different channel
- Sender is explicitly external — no ambiguity about company affiliation
- No score impact on this screen
- Voice-over: reads the scenario and message aloud (script in slide notes)

Resource Check

A gated look-up — the learner must open this before responding

BLOOM'S LEVEL

Apply

Uses the handbook guidance to inform the decision.

Not sure? You can check the guidance before you answer Aditya.

External Sharing Guidance

Tap to view — required before you can respond

NEXATECH EMPLOYEE HANDBOOK — 4.2 · EXTERNAL SHARING

External Sharing

Any request from outside NexaTech — vendors, partners, clients — is reviewed by your manager first, regardless of how sensitive the material seems. This applies even to internal schedules, templates, or process documents.

Page 12 of 46 · Last reviewed: March 2026

Once viewed, the response options unlock on the next screen.

SCREEN

1.6

INTERACTION

Learner clicks the resource card to reveal the guidance text in place (lightbox or expand-in-place).

BUILD NOTES

- Set variable Guidance_Viewed = True on click
- Screen 1.7's options stay disabled until Guidance_Viewed = True
- Learner can re-open the guidance any time; not scored
- Styled as a real handbook excerpt (letterhead, section number, page footer), not a placeholder quote
- Differentiator from the companion project's plain branching — pairs a decision with performance support
- No voice-over — learner reads at their own pace

Decision Point 2

Options unlocked — now informed by the guidance

BLOOM'S LEVEL

Apply

Applies the guidance to a realistic request.

Now that you've seen the guidance, how do you respond to Aditya?

A Send the schedule — it's not confidential, so it's fine to share directly.

B Let Aditya know you'll check with your manager before sending anything.

Two options this time, not four — the guidance already narrowed the real choice down.

SCREEN

1.7

INTERACTION

Two selectable response cards, disabled until Guidance_Viewed = True on 1.6. Selecting one advances to the matching feedback layer.

BUILD NOTES

- On click: set Choice_4b = A / B, set both cards to Disabled, mark the clicked card Selected, show its layer
- Branch: A → 1.7 A, B → 1.7 B
- Both cards start Disabled and change to Normal once Guidance_Viewed = True
- Locked within a visit; resets on revisit (same as 1.3)
- No voice-over — learner is deciding

Consequence & Feedback

“What Would You Do?” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against the guidance just read.

YOU CHOSE

A — “Send the schedule directly.”

MISMATCH WITH GUIDANCE

The guidance you just read was clear: external requests go through your manager first, regardless of how sensitive the content feels. Sending the schedule directly skips that step — even though your instinct that it wasn’t sensitive was reasonable enough on its own.

Consequence: *Your manager finds out about the exchange after the fact and has to follow up with Aditya to clarify what NexaTech’s actual process is.*

LAYER

1.7 A

INTERACTION

Learner reaches this layer only after choosing A on 1.7. Slide-in feedback panel with a red status tag and a Continue button to 1.8.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: warning triangle
- Continue button → 1.8 (converges with Decision 1)
- Log Choice_4b = A for reporting
- No voice-over; Prev is disabled on the layer

Consequence & Feedback

“What Would You Do?” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against the guidance just read.

YOU CHOSE

B — “Check with my manager first.”

STRONGEST RESPONSE

This is exactly what the guidance calls for. Your manager reviews the request, confirms a general overview is fine to share, and you send Aditya a short summary the same day.

Consequence: *Aditya gets a helpful answer, and you’ve now used the actual guidance instead of guessing — twice in one week.*

LAYER

1.7 B

INTERACTION

Learner reaches this layer only after choosing B on 1.7. Slide-in feedback panel with a green status tag and a Continue button to 1.8.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: check mark
- Continue button → 1.8 (converges with Decision 1)
- Log Choice_4b = B for reporting
- No voice-over; Prev is disabled on the layer

"When you're not sure whether something can be shared, don't guess. Check the guidance, or ask the person who owns that decision, before you act."

Two different situations — a colleague and a vendor, an internal doc and an internal schedule — same habit both times. Checking before acting is what makes the judgment call easy, whether or not a resource is handed to you.

SCREEN 1.8 · PRINCIP

Good judgment isn’t about knowing every policy by heart.

It’s knowing when to pause and check.

Continue to Module 5 — Logistics

Storyline Build Summary

Variables, triggers and states needed to develop Module 4

Variables	Choice_4a (text: A/B/C/D) from 1.3. Guidance_Viewed (true/false) from 1.6. Choice_4b (text: A/B) from 1.7.
Slide / layer structure	Base slides 1.1–1.9 in Scene 1 “Policies and Expectations” (titles on the next page). Layers 1.3 A–D sit on 1.3 (Decision Point 1); layers 1.7 A–B sit on 1.7 (Decision Point 2) — the slide stays visible behind the feedback.
Branching logic — Decision 1	Each option card on 1.3 runs one trigger sequence on click: set Choice_4a, set all four cards to Disabled, mark the clicked card Selected, show its matching layer. All four layers share one Continue button that jumps to 1.4.
Gating logic — Decision 2	1.6’s resource card sets Guidance_Viewed = True on click. On 1.7, both cards start in the Disabled state and are set to Normal when Guidance_Viewed = True (checked on slide start and whenever the variable changes).
States	Option cards: Normal → Hover → Selected → Disabled. Disabled is Storyline’s built-in state, so it also blocks further clicks once a choice is made; on 1.7 it is also the starting state until the guidance is viewed.
Reporting	Choice_4a and Choice_4b can both be reported to the LMS as interaction results if the portfolio build includes tracking; not required for a standalone demo.

Storyline Build Summary (2 of 2)

Player, narration, navigation and delivery decisions made during development

Slide titles	Menu titles: Welcome · Message From Daniel · Decision Point 1 · One Decision Down · Message From Aditya · Guidance Check · Decision Point 2 · Principle · Wrapping Up. Layers are named 1.3 A–D and 1.7 A–B (not shown to learners).
Player & navigation	Modern player: left sidebar menu, title “NexaTech Onboarding · Module 4”, captions on, Resources tab. Prev and Next are disabled on decision slides and feedback layers; Prev stays on 1.4 and 1.8 so a learner can go back and reconsider.
Narration	AI voice-over on 1.1, 1.2, 1.4, 1.5, 1.8 and 1.9 — screens where the learner is receiving or reflecting. None on 1.3, 1.6, 1.7 or the feedback layers, where the learner decides or reads at their own pace. Scripts are in each slide’s notes.
Revisit behaviour	Narrated slides and both decision slides are set to Reset to initial state on revisit: the voice-over replays, and a learner who goes back with Prev (from 1.4 or 1.8) gets a fresh, unlocked decision. Within one visit the choice stays locked.
Theme & colour	Custom NexaTech theme: navy #1E2761 for structure and buttons, purple #5B3E96 for decision cards and accents, lavender #EFE9F7 for the welcome screen. Status colours appear only on feedback layers: red #B23A2E, amber #B8860B, green #2C7A4B, gray #5B6472.
Delivery in Rise	Module 4 is published as a web package and embedded in the Rise course through a Storyline block, with a short lead-in text block before it and a hand-off block after it. Republish and replace the package to update it.
