NEXATECH ONBOARDING PATHWAY

Module 6 — Culture & Ways of Working

“The Deadline Problem”

A single-decision branching scenario about ownership and early communication, followed by a short transfer-practice screen. Storyboarded to the same level as Module 4; not scheduled for Storyline development.

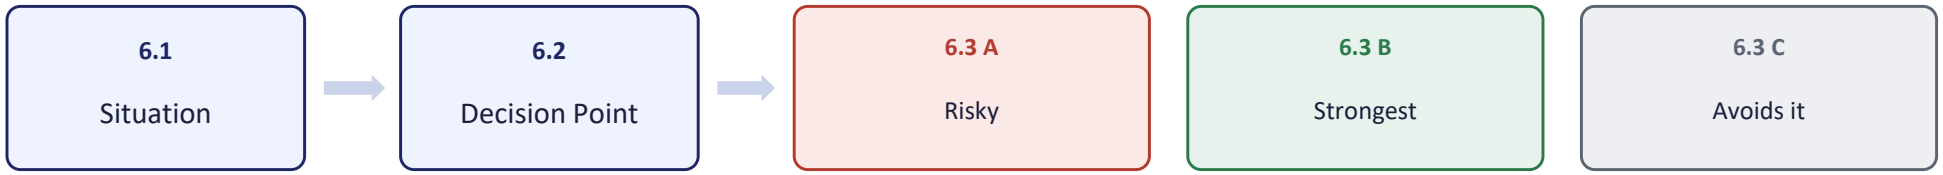

1 decision point | Consequence-based feedback | Storyboard level — not built

Instructional Design Portfolio Project
Designer: Sanjana Kashyap

Screen Flow & Design Intent

One decision point plus a short transfer-practice screen — storyboard level only, matching Module 4's format

THE DEADLINE PROBLEM

BLOOM'S LEVEL BY SCREEN

6.1 Understand
6.2 Apply → Evaluate
6.3 A–C Evaluate
6.5 Apply
6.4 Understand → Analyze

Situation Setup

Learner reviews the situation before making a decision

BLOOM'S LEVEL

Understand

Reads and interprets the situation before any decision.

WORKBOARD

PN

Priya Nair

Design Team · Joint project

Hey! Just checking — are we still on track for tomorrow? I've got my part nearly done on my end.

You're behind on your part of the deliverable, and you haven't told anyone yet. The deadline is tomorrow.

What do you do?

SCREEN

6.1

INTERACTION

Learner reads the WorkBoard message and situation, then presses Continue to the decision point.

BUILD NOTES

- Trigger: Continue button → jump to 6.2 on click
- Reuses the project-tool message pattern (WorkBoard) rather than chat/email, to keep Module 6 visually distinct from Module 4
- Keep the situation ordinary — a stretched timeline, not a crisis — so the decision is genuinely about when to speak up
- No score impact on this screen

Decision Point

Learner selects one response — single attempt

BLOOM'S LEVEL

Apply → Evaluate

Weighs three options against risk to the deliverable and the working relationship.

The deadline is tomorrow. What do you do?

A — Wait and see how things go — you might still catch up on your own.

B — Tell Priya and your manager now, and talk through options together.

C — Ask Priya to quietly cover your part, without saying why.

SCREEN

6.2

INTERACTION

Three selectable response cards. Selecting one locks the choice and advances to the matching feedback layer.

BUILD NOTES

- On click: set Choice_6 = A / B / C, set all three cards to Disabled, mark the clicked card Selected, show its layer
- Branch: A → 6.3 A, B → 6.3 B, C → 6.3 C
- Locked within a visit; slide resets on revisit, so going back with Prev gives a fresh decision
- No "correct answer" styling shown at this stage
- No voice-over — learner is deciding

Consequence & Feedback

“The Deadline Problem” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence for the working relationship.

YOU CHOSE

A — “Wait and see how things go.”

RISKY MOVE

You waited, hoping to catch up on your own. By the next morning your part still wasn’t ready, and there was no time left to fix it or bring in help.

Consequence: Priya found out only when the deliverable was already late — and now she’s wondering why you didn’t say anything sooner.

LAYER

6.3 A

INTERACTION

Learner reaches this layer only after choosing A. Slide-in feedback panel with a red status tag and a Continue button to 6.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: warning triangle
- Continue button → 6.4 (all branches converge)
- Log Choice_6 = A for reporting
- No voice-over; Prev is disabled on the layer

Consequence & Feedback

“The Deadline Problem” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence for the working relationship.

YOU CHOSE

B — “Tell Priya and my manager early.”

STRONGEST RESPONSE

You flagged it early. Priya adjusted her timeline, and your manager helped reprioritise another task so you could focus. The deliverable went out on time.

Consequence: Priya said she appreciated knowing early enough to actually help, instead of finding out at the last minute.

LAYER

6.3 B

INTERACTION

Learner reaches this layer only after choosing B. Slide-in feedback panel with a green status tag and a Continue button to 6.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: check mark
- Continue button → 6.4 (all branches converge)
- Log Choice_6 = B for reporting
- No voice-over; Prev is disabled on the layer

Consequence & Feedback

“The Deadline Problem” — branch outcome

BLOOM’S LEVEL

Evaluate

Judges the choice against its consequence for the working relationship.

YOU CHOSE

C — “Ask Priya to quietly cover my part.”

AVOIDS THE PROBLEM

Priya picked up your part without knowing why, and got it done — but she was left confused about what happened, and a little frustrated you didn’t just tell her.

Consequence: The deliverable went out fine, but next time you’re behind, Priya may be less willing to jump in without an explanation.

LAYER

6.3 C

INTERACTION

Learner reaches this layer only after choosing C. Slide-in feedback panel with a gray status tag and a Continue button to 6.4.

BUILD NOTES

- Show feedback as a layer, not a new base slide
- Icon: minus / dash
- Continue button → 6.4 (all branches converge)
- Log Choice_6 = C for reporting
- No voice-over; Prev is disabled on the layer

Transfer Practice

Optional — a smaller version of the same judgement call

BLOOM'S LEVEL

Apply

Applies the same judgement to a smaller, lower-stakes example.

A teammate asks you to double-check their numbers before a report goes out tomorrow. You're stretched thin, but it seems minor.

A — Assume it's fine and skip it.

B — Let them know today that you're stretched thin, so they can plan around it.

B is the stronger move — flagging it early costs a sentence; staying quiet risks the report and their trust in asking you again.

SCREEN

6.5

INTERACTION

Learner picks one of two options. Unlike 6.2, this screen shows brief inline guidance beneath the choices rather than branching to a separate layer — lower-stakes, optional practice.

BUILD NOTES

- No layers or variables — this screen is optional practice, not scored or reported
- Both cards remain clickable; no lock/disable logic needed since there's no branch to protect
- Trigger: Continue button → jump to 6.6 on click
- No voice-over

!

"Ownership doesn't mean solving every problem alone. It means recognising risk early, and communicating before a small delay becomes a bigger one."

Two different moves — staying quiet, or quietly offloading — both dodge the same conversation. The version that actually works is the one where you say something before it's too late to help.

SCREEN 6.4 · TAKEAV

Ownership isn’t about carrying everything yourself.

It’s about speaking up before it becomes someone else’s problem too.

Continue to Module 7 — Tools, Resources & Support

Storyline Build Summary (Hypothetical)

What this scenario would need if it were built — kept to Module 4's level of detail for portfolio parity

Variables	Choice_6 (text: A/B/C) from 6.2. No variable needed for 6.5 — it's ungated practice, not a tracked decision.
Slide / layer structure	Base slides 6.1–6.6 in a single scene. Layers 6.3 A–C sit on 6.2 (Decision Point) — the slide stays visible behind the feedback, the same pattern used on Module 4's 1.3.
Branching logic	Each option card on 6.2 would run one trigger sequence on click: set Choice_6, set all three cards to Disabled, mark the clicked card Selected, show its matching layer. All three layers would share one Continue button that jumps to 6.4.
Transfer screen (6.5)	6.5 needs no gating and no variable — both cards stay clickable throughout, and feedback is shown inline rather than as a separate layer, since it's optional practice rather than a scored decision.
States	Option cards on 6.2: Normal → Hover → Selected → Disabled, identical to Module 4's 1.3. The 6.5 cards need only Normal → Hover, since nothing locks.
Reporting	Choice_6 could be reported to the LMS as an interaction result if this module is ever built; not required for a storyboard-only deliverable.
