

Module 2

Delegation & Trust-Building

BLOOM'S LEVEL

Analyse

FORMAT

Branching scenario

EST. TIME

6–8 min

LEARNING OBJECTIVE

By the end of this module, learners will be able to **differentiate** between team members' capability, availability, and developmental needs, and **structure** an appropriate level of oversight to match the delegated task to the right person.

SCENARIO PREMISE

A manager is juggling a full plate and has two team members available to take on a new task: one is capable but new to the team, the other is experienced but currently overloaded. The learner must decide what to delegate, to whom, and how much oversight to build in.

DECISION POINT 1: What to delegate, and to whom

Choice	Consequence
Delegate to the overloaded but experienced teammate	Task gets done well but adds to burnout risk. Surfaces a hidden cost of defaulting to your most reliable person.
Delegate to the newer teammate with no check-in plan	Teammate struggles silently; task slips. Shows the risk of delegating without calibrating oversight to experience level.
Delegate to the newer teammate with a short check-in built in	Teammate succeeds and grows in confidence. Models delegation as matching task, person, and the right level of support.

DECISION POINT 2: The task hits a snag (path-dependent)

Follow-up scenario branches based on Decision Point 1: if oversight was skipped, the learner now faces a missed deadline and must decide whether to step in, let it fail as a lesson, or coach through it live. If a check-in was built in, the snag is caught earlier and the decision is lower-stakes. This reinforces that the Decision 1 choice shaped what Decision 2 even looks like.

ASSESSMENT APPROACH

Consequence-based branching throughout (Analyse-level skill), closing with a short variable-driven reflection: “What would you calibrate differently next time?” rather than a scored quiz.

WHY THIS FITS THE SEQUENCE

Placed second because it builds directly on Module 1's coaching skill, reading a person accurately, and adds the harder step of acting on that read by letting go of control.

Module 3

Difficult Conversations & Conflict Navigation

BLOOM'S LEVEL

Evaluate

FORMAT

Branching scenario

EST. TIME

8–10 min

LEARNING OBJECTIVE

By the end of this module, learners will be able to **critique** possible responses to an emerging team conflict and **justify** an approach that addresses it directly, without avoidance or escalation.

SCENARIO PREMISE

Two team members are in an ongoing disagreement that's starting to affect team output. One of them has come to the learner (their manager-to-be) to vent, expecting the issue to just be smoothed over. The learner has to decide whether and how to address it directly.

DECISION POINT 1: How to respond to being pulled into it

Choice	Consequence
Avoid it: tell them to work it out themselves	Tension continues and starts affecting a shared deadline. Shows the cost of avoidance.
Address it immediately and directly with both people together, unprepared	Conversation gets defensive fast. Shows that directness without preparation can backfire.
Take time to hear both sides separately first, then facilitate a joint conversation	Both team members feel heard and reach a working agreement. Models structured conflict navigation.

DECISION POINT 2: Pushback or escalation (path-dependent)

If the learner avoided the issue in Decision 1, they now face an escalated version, such as a formal complaint or a visible team split. If they facilitated well, Decision 2 instead tests whether they can hold the agreement accountable over time without micromanaging the relationship.

ASSESSMENT APPROACH

Evaluate-level branching (higher stakes than Module 2's Analyse-level choices), closing with a personalised summary highlighting the learner's tendency (avoid, confront, or facilitate) based on their choices. This is framed as self-awareness, not a score.

WHY THIS FITS THE SEQUENCE

Sits third because it combines Module 1's empathy skill with materially higher emotional stakes and real disagreement, a harder judgment call than either coaching or delegating alone.

Module 4

Strategic Decision-Making & Business Acumen

BLOOM'S LEVEL

Evaluate / Create

FORMAT

Case study + decision sim

EST. TIME

8–10 min

LEARNING OBJECTIVE

By the end of this module, learners will be able to **evaluate** trade-offs across cost, timeline, and stakeholder impact, and **construct** a resourcing recommendation that accounts for both local and organizational needs.

SCENARIO PREMISE

The learner is given a resourcing decision that goes beyond their immediate team, for example, reallocating a shared budget or headcount between two competing priorities. Unlike Modules 1–3, this is framed as a case study with real data points (cost, timeline, stakeholder impact) rather than a purely interpersonal scenario.

DECISION POINT: Choose among data-backed options

Choice	Consequence
Optimise for the immediate team's short-term need	Immediate relief, but a dashboard view shows downstream cost to a dependent team. Surfaces the trade-off of local optimisation.
Optimise for the organisation's stated priority, even though it's unpopular with the immediate team	Longer-term alignment, but visible team morale dip shown in the consequence dashboard. Surfaces the cost of ignoring team buy-in.
Propose a phased option that partially addresses both	Slower but more sustainable outcome across both dashboards (cost, timeline, stakeholder sentiment). Models integrative strategic thinking.

FOLLOW-THROUGH: Not a second decision point, but a consequence dashboard

Rather than a second branching decision, this module closes with a simple simulated dashboard (cost impact, timeline impact, stakeholder sentiment) that updates based on the Decision Point choice, making the trade-offs visible and concrete rather than only narrated.

ASSESSMENT APPROACH

Evaluate/Create-level: the learner isn't just choosing a response, they're weighing multi-variable trade-offs, closer to a business case exercise than a scenario branch. Assessed via the dashboard outcome plus a short written rationale prompt, not a scored quiz.

WHY THIS FITS THE SEQUENCE

Placed last because it's the only module that shifts from interpersonal judgment to organisational judgment, the actual leap that promotion readiness is meant to signal.
